

# ChamaApp Backend

Chama

## Architeture and frameworks

Dotnet core API

Ef Core

SQL Server

Azure

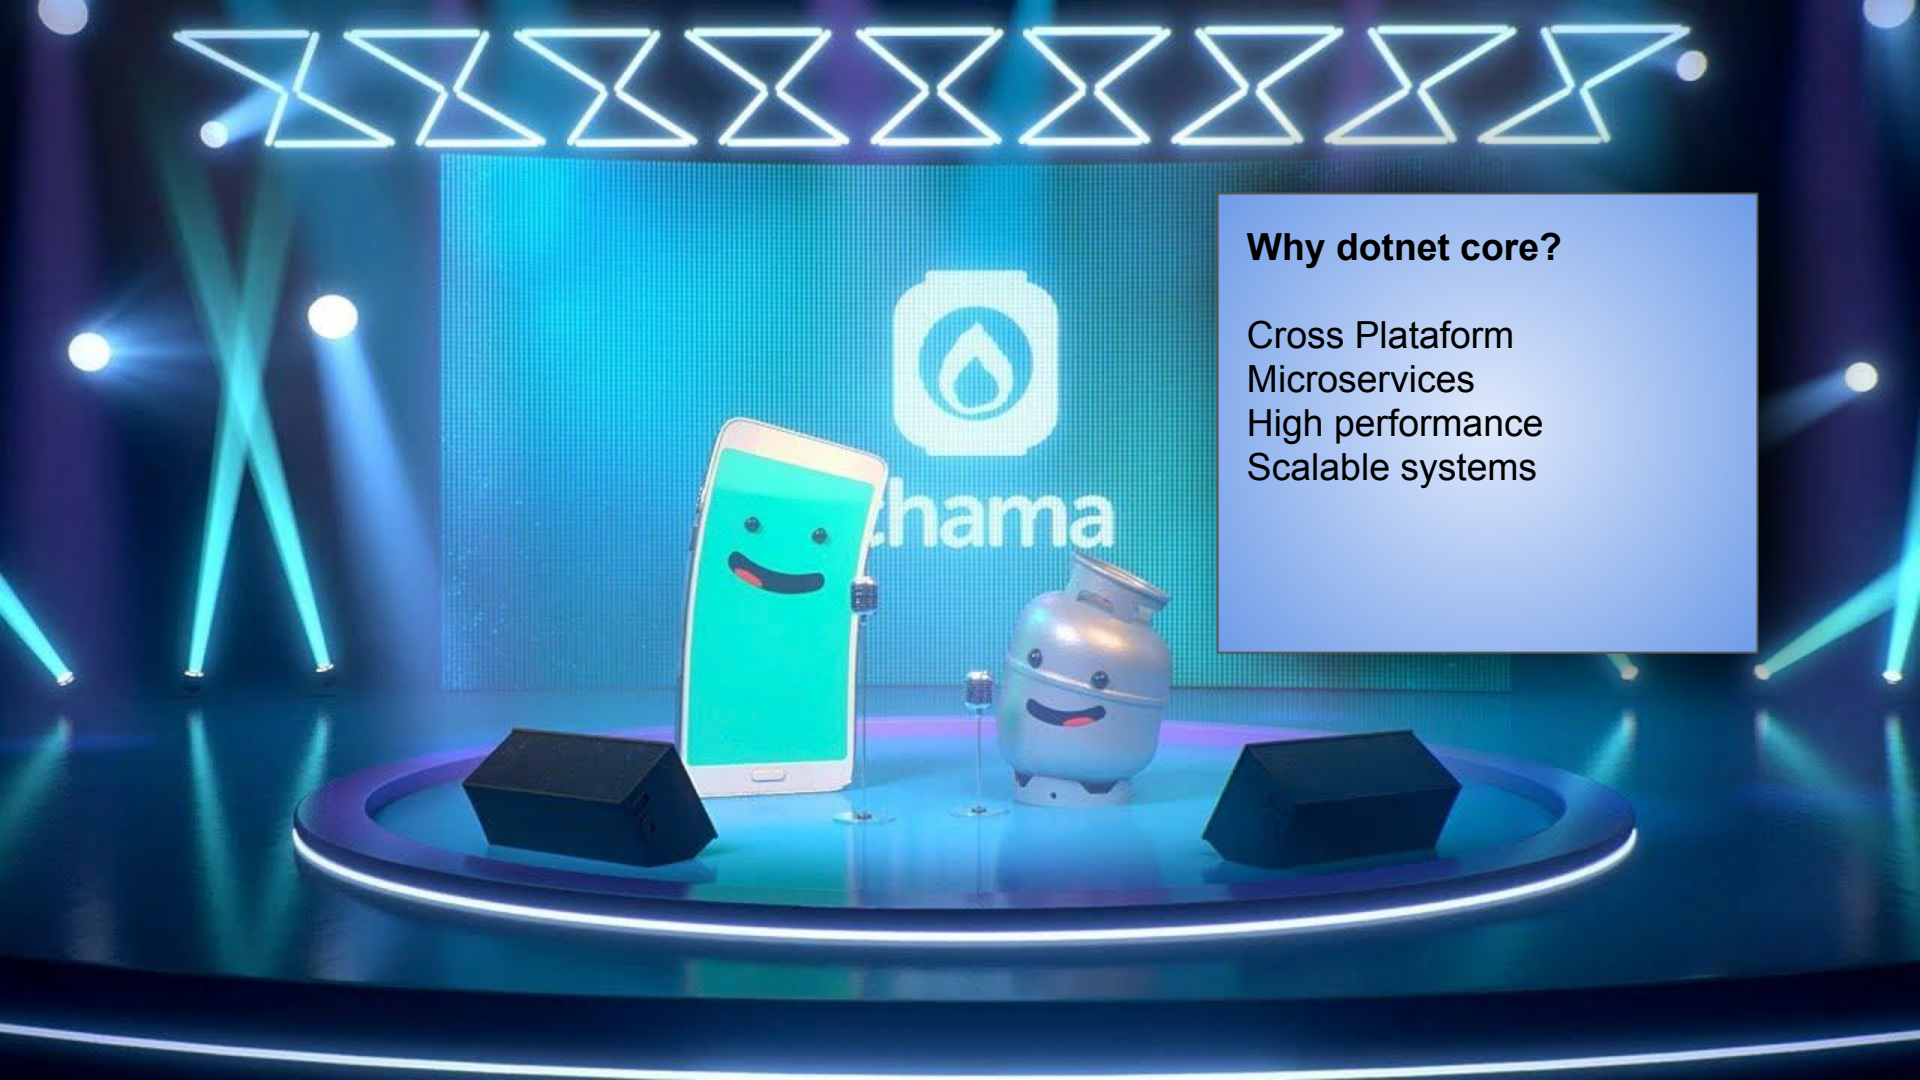

NLog

## Why dotnet core?

Cross Platform  
Microservices  
High performance  
Scalable systems

## How I solve them...

Creating API

Entity Framework - Model First

NLog

Azure Service

Process - Queue and Response

## Problems

The biggest problem was having time... because it was Father's Day

EF Core (incompatibility)  
Azure

## Improvement

Change NLog for Serilog  
Cache (if is possible)
